

# Migatronc TIG Adjust

*The versatile TIG Adjust aircooled or watercooled torches allow you to weld in hard-to-reach locations.*

## Migatronc TIG Adjust provides full 360 degree-of-freedom!

TIG Adjust is designed for welding operations where repeated adjustments of the torch body are an everyday occurrence and use of conventional torches is physically impossible. The outermost part of the torch body can be turned in any direction and has almost unlimited life as opposed to a standard Flex torch.

The aircooled or watercooled TIG Adjust can be equipped with two different size torch bodies. The torch bodies can be equipped with standard wearing parts.

For the small torch body, standard wearing parts from the TIG 101-301 range can be used. For the large torch body, standard wearing parts from the TIG 201-401 range can be used. All wearing parts for these models can be used for TIG Adjust without limit. TIG Adjust is supplied without wearing parts as standard. TIG Adjust suits the two different size torch handles of the TIG Ergo range and all TIG Ergo control units are applicable. TIG Adjust is supplied in all 4 m and 8 m TIG Ergo models, but also offered in special lengths for regular orders. TIG Adjust can be ordered as a standard custom-built solution.
